

- 1.Created 4 classes WebDriverLaunch,Login,AdminPage and BaseTest .
- 2.WebDriverLaunch class is used for setting the precondition and initializing the browser.
- 3.Login class is used to login the site as an admin.
- 4.AdminPage class is used for adding a push notification and also one method for database validation are created to get the value of the given column.
- 5.BaseTest class extend the WebDriverLaunch class and is the base class from where all the actions of each classes are controlled by creating objects of each classes and also database validations are being performed by using assertions .

Before Adding the Push Notification(Admin Panel):

The screenshot shows the EasyOrdering Admin Panel. The left sidebar has a menu with 'Marketing' expanded, showing 'Coupons', 'Mail', and 'Push Notification'. The main content area is titled 'Push Notification' and contains a 'Notification List' table. The table has columns: #, Notification Name, Message, Image, Date Added, and Action. The table is empty, displaying 'No matching records found'. Above the table, there is a search bar with 'Test_Achyut' and buttons for 'Copy', 'CSV', 'Excel', 'PDF', and 'Print'. Below the table are 'Previous' and 'Next' pagination buttons.

After Adding the Push Notification(Admin Panel):

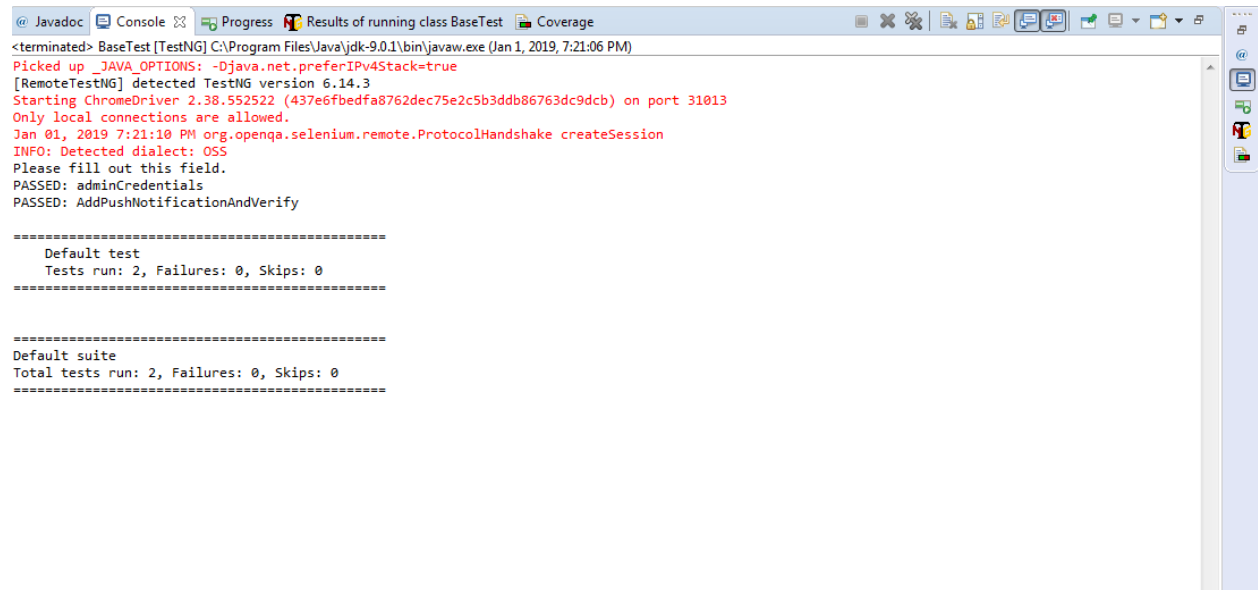

The screenshot shows the EasyOrdering Admin Panel after adding a push notification. The 'Push Notification' section now displays one record in the 'Notification List' table. The record has the following details:

#	Notification Name	Message	Image	Date Added	Action
1	Test_Achyut	Test_Success		2019-01-01 19:21:36	Action

The 'Action' button is a blue dropdown menu. The pagination shows 'Previous', '1', and 'Next'.

Console:

The screenshot shows an IDE console window with the following content:
